SUMMARY

Product designer with experience turning complex workflows into clear, accessible interfaces for teams that need practical software.

CORE SKILLS

Product Design: Figma, Design Systems, Prototyping, Interface QA

Research & Strategy: Research, Usability Testing, Information Architecture, Workshops

Quality & Handoff: Accessibility, Content Design, Design Tokens, Documentation

PROFESSIONAL EXPERIENCE

NORTHSTAR LABS - Senior Product Designer

2021 - Present | Remote product team

Owned design work for a complex SaaS platform, including research, journey mapping, prototypes, design system improvements, accessibility reviews, and handoff with engineering.

- Led discovery and design work for a planning workspace used by several operations teams.
- Built reusable interface patterns for dashboards, filters, approval flows, and reporting views.
- Partnered with engineering to improve accessibility, loading states, empty states, and form behavior.
- Created documentation that helped product, design, and engineering teams use shared patterns consistently.

BRIGHTLINE STUDIO - UX Designer

2018 - 2021 | Client services

Created responsive web experiences and product flows for client teams, balancing brand needs, usability goals, content strategy, and implementation constraints.

- Designed responsive marketing pages, onboarding flows, and product screens from loose client requirements.
- Turned sketches and stakeholder notes into practical layouts that could be built without extra design churn.
- Audited existing pages for usability issues, inconsistent spacing, and confusing navigation patterns.
- Worked with developers to keep visual details, content needs, and implementation limits aligned.

HARBOR SUPPORT - Customer Operations Lead

2014 - 2018 | Operations team

Managed support workflows, documented recurring issues, helped improve internal tooling, and partnered with product teams on customer pain points.

- Maintained daily support workflows and helped the team keep response quality consistent.
- Documented recurring customer issues so product and operations teams could spot patterns faster.
- Coached teammates on process updates, internal tools, and clearer client communication.
- Worked with product partners to turn support trends into practical improvements.

SELECTED SAMPLE PROJECTS

- Workflow audit: mapped a complex internal approval process and reduced duplicate steps across several teams.
- Component library: built documentation and usage guidance for shared interface components.

- Prototype sprint: helped a small team validate a new dashboard concept before engineering investment.
