SUMMARY

Senior front-end developer with a strong ecommerce background and experience building, improving, and maintaining production websites across retail, wholesale, B2B, and marketing environments. Skilled in JavaScript, React, Liquid, PHP-based systems, responsive UI, performance optimization, SEO, accessibility, checkout experiences, search/product discovery, and developer workflow standards.

Strongest in roles that require practical front-end engineering, platform problem-solving, and the ability to turn complicated business requirements into maintainable web tools. Experienced supporting business-critical sites, modernizing older codebases, working across custom PHP ecommerce systems and Shopify platforms, and building reusable features across multiple ecommerce properties.

Optimization & Site Quality Core Web Vitals · AMP · Asset Loading · Script Cleanup · SEO · Structured Data · Google Merchant Center Support · A/B Testing · Google Optimize

PROFESSIONAL EXPERIENCE

AUTOMOTIVE PERFORMANCE GROUP (APG) — Lead Front-End Developer

2016 – October 2025

Led front-end development across a portfolio of aftermarket automotive ecommerce websites, supporting custom PHP ecommerce systems, Shopify migration work, storefront development, custom platform features, checkout flows, search/product discovery, performance, SEO, accessibility, and developer standards.

- Served as lead front-end developer for ecommerce storefronts spanning retail, wholesale, and B2B use cases.
- Supported and modernized custom PHP-based ecommerce platforms for several years before helping transition key sites and workflows to Shopify.
- Supported development across **8 Shopify stores** during the company's Shopify migration period, maintaining storefront code, shipping new features, and helping keep platform work consistent across multiple brands.
- Helped transition key ecommerce sites to Shopify through Liquid theme development, reusable storefront features, app block implementation, and storefront modernization.
- Built React-based Shopify app functionality and internal tools that allowed reusable ecommerce features to be deployed across multiple stores instead of rebuilt store by store.
- Developed custom discount and promotional tools to support business rules that were too specific for out-of-the-box platform behavior.
- Built customer data workflows, webhook-driven tooling, custom admin pages, and storefront integrations for specialized B2B ecommerce needs.
- Built and maintained product discovery features using Bloomreach and Algolia, including search interfaces, product listing behavior, recommendations, product placement, and analytics-focused merchandising tools.
- Rebuilt checkout experiences used across multiple ecommerce stores, including Braintree-related work and Apple Pay / Google Pay support.
- Improved site speed and front-end performance through script cleanup, asset-loading improvements, AMP support, and Core Web Vitals-focused optimizations; reduced user-facing load time by up to roughly 9 seconds on one ecommerce store.
- Supported SEO, accessibility, and technical site-quality improvements, including structured data fixes, content placement, duplicate data cleanup, link/href improvements, and Google Merchant Center issue support.

- Planned and supported A/B tests for checkout flows, product placement, UI changes, and conversion-focused experiments.
- Established front-end workflow standards for GitHub usage, documentation, comments, file organization, and code review.
- Managed one front-end developer for several years and later managed a front-end contractor for approximately three years while continuing hands-on development.

CODE CORPORATION — Web Developer

2012 – 2016

Built and maintained company websites and marketing-focused web experiences, supporting projects from layout and implementation through updates, troubleshooting, and ongoing improvements.

- Designed, coded, and modified websites based on business requirements, visual direction, and usability goals.
- Built responsive, user-friendly web experiences with clear navigation and maintainable front-end structure.
- Supported PHP, JavaScript, and jQuery-based websites across implementation, maintenance, troubleshooting, and content updates.
- Partnered with internal teams to deliver web pages, campaign assets, and digital experiences for marketing and business needs.

NETMAIL — Support Team Lead / Engineer

2008 – 2012

Led daily operations for a technical support team, helping maintain service quality, client satisfaction, SLA performance, and support process standards.

- Managed daily support operations and helped maintain quality standards across the team.
- Hired, trained, supervised, and supported staff in a technical client-service environment.
- Coordinated support projects and helped introduce process improvements, tooling, and operational standards.
- Worked directly with clients and internal teams to resolve technical issues and improve support consistency.

ADDITIONAL PROJECTS

FREELANCE / INDEPENDENT WEB WORK

2025 – Present

Providing independent web development support while pursuing the next full-time role, including ongoing maintenance and technical fixes for an existing client website. Focus areas include front-end updates, PHP/scripting support, website maintenance, ecommerce improvements, performance cleanup, SEO fixes, and small business web projects.

ESSANTÉ ORGANICS — Web Development & Technical Support

2016 – 2018; 2025 – Present

Provided development and technical support for a custom web platform, including front-end updates, PHP/scripting fixes, website maintenance, content support, and miscellaneous implementation work in collaboration with marketing and design stakeholders.

TICKET RUMBA — BigCommerce Development

2017

Developed the front end of a BigCommerce website from provided designs and supported CMS and analytics implementation using Stencil, LESS, and KeenIO-related analytics work.
